

GBM Enhanced is a unique blend developed for poultry. The synergy of the ingredients results in an optimal gut health and integrity and a positive gut microflora balance, promoting the feed digestion, the nutrient absorption and assimilation.

Individual studies demonstrate the production benefits of GBM Enhanced:

- × Improved FCR and weight gain
- × Improved overall health and immunity status
- × Drier = better litter quality = lower ammonia concentrations

Calcium Butyrate Based Supplement for Broilers

Despite natural defense mechanisms, enteric problems continue to be the main concern in intensive poultry production. Therefore digestive health, in its broadest sense, has become the main priority in livestock production.

Feeding GBM Enhanced makes your broilers grow faster with less feed.

Based on a large number of trials, on average GBM Enhanced generates * €600 profit extra per 10000 animals, equal a ROI of 1:7

*indicative, can vary depending prices and conditions

GBM Enhanced, improving FCR and weight gain in broilers

Neiker (experimental station) - Spain, 2013
 Trial period from d. 1 until 42 days. Total: 600 birds
 300 animals per treatment / 10 replicates per treatment
 Positive control = negative control + GBM Enhanced 1kg/T

GBM Enhanced, improving FCR and weight gain in broilers

University of Poznan - Poland, 2016
 Trial period from d.1 until 42 days. Total: 160 birds
 8 birds per treatment / 10 replicates per treatment
 Positive control = negative control + GBM Enhanced (750- 500-500 g/T)
